

## § 275.10

## 7 CFR Ch. II (1–1–03 Edition)

household name, etc.), the proportion which were not subject to review, as well as the method used to select the sample;

(vii) Where applicable, the numerical extent of any deficiency detected through examination of program records; and

(viii) Any pertinent comments concerning the sub-unit's operation.

(2) State agencies shall promptly forward review findings to the appropriate State office for analysis, evaluation, and corrective action planning. Review worksheets shall be retained in an orderly fashion and made available to FNS upon request.

[Amdt. 160, 45 FR 15900, Mar. 11, 1980; 45 FR 25375, Apr. 15, 1980, as amended by Amdt. 266, 52 FR 3409, Feb. 4, 1987; Amdt. 356, 59 FR 29713, June 9, 1994]

### Subpart C—Quality Control (QC) Reviews

#### § 275.10 Scope and purpose.

(a) As part of the Performance Reporting System, each State agency is responsible for conducting quality control reviews. For food stamp quality control reviews, a sample of households shall be selected from two different categories: Households which are participating in the Food Stamp Program (called active cases) and households for which participation was denied, suspended or terminated (called negative cases). Reviews shall be conducted on active cases to determine if households are eligible and receiving the correct allotment of food stamps. The determination of whether the household received the correct allotment will be made by comparing the eligibility data gathered during the review against the amount authorized on the master issuance file. Reviews of negative cases shall be conducted to determine whether the State agency's decision to deny, suspend or terminate the household, as of the review date, was correct. Quality control reviews measure the validity of food stamp cases at a given time (the review date) by reviewing against the Food Stamp Program standards established in the Food Stamp Act and the Regulations, taking into account any FNS authorized waivers to deviate from specific regulatory provisions.

FNS and the State agency shall analyze findings of the reviews to determine the incidence and dollar amounts of errors, which will determine the State agency's liability for payment errors and eligibility for enhanced funding in accordance with the Food Stamp Act of 1977, as amended, and to plan corrective action to reduce excessive levels of errors for any State agency that is not entitled to enhanced funding.

(b) The objectives of quality control reviews are to provide:

(1) A systematic method of measuring the validity of the food stamp caseload;

(2) A basis for determining error rates;

(3) A timely continuous flow of information on which to base corrective action at all levels of administration; and

(4) A basis for establishing State agency liability for errors that exceed the National standard and State agency eligibility for enhanced funding.

(c) The review process is the activity necessary to complete reviews and document findings of all cases selected in the sample for quality control reviews. The review process shall consist of: (1) Case assignment and completion monitoring; (2) case reviews; (3) supervisory review of completed worksheets and schedules; and (4) transmission of completed worksheets and schedules to the State agency for centralized data compilation and analysis.

[Amdt. 149, 44 FR 45893, Aug. 3, 1979, as amended by Amdt. 260, 49 FR 6304, Feb. 17, 1984; 54 FR 7016, Feb. 15, 1989; Amdt. 328, 56 FR 60051, Nov. 27, 1991; Amdt. 373, 64 FR 38294, July 16, 1999]

#### § 275.11 Sampling.

(a) *Sampling plan.* Each State agency shall develop a quality control sampling plan which demonstrates the integrity of its sampling procedures.

(1) *Content.* The sampling plan shall include a complete description of the frame, the method of sample selection, and methods for estimating characteristics of the population and their sampling errors. The description of the sample frames shall include: source, availability, accuracy, completeness, components, location, form, frequency

## Food and Nutrition Service, USDA

## § 275.11

of updates, deletion of cases not subject to review, and structure. The description of the methods of sample selection shall include procedures for: estimating caseload size, overpull, computation of sampling intervals and random starts (if any), stratification or clustering (if any), identifying sample cases, correcting over-or undersampling, and monitoring sample selection and assignment. A time schedule for each step in the sampling procedures shall be included. If appropriate, the sampling plan shall include a description of its relationship, to other Federally-mandated quality control samples (e.g., Temporary Assistance for Needy Families or Medicaid).

(2) *Criteria.* Sampling plans proposing non-proportional integrated sampling, or other alternative designs shall document compliance with the approval criteria in paragraph (b)(4) of this section. All sampling plans shall:

(i) Conform to principles of probability sampling;

(ii) Specify and explain the basis for the sample sizes chosen by the State agency;

(iii) If the State agency has chosen an active sample size as specified in paragraph (b)(1)(iii) of this section, include a statement that, whether or not the sample size is increased to reflect an increase in participation as discussed in paragraph (b)(3) of this section, the State agency will not use the size of the sample chosen as a basis for challenging the resulting error rates.

(iv) If the State agency has chosen a negative sample size as specified in paragraph (b)(2)(ii) of this section, include a statement that, whether or not the sample size is increased to reflect an increase in negative actions as discussed in paragraph (b)(3) of this section, the State agency will not use the size of the sample chosen as a basis for challenging the resulting error rates.

(3) *Design.* FNS generally recommends a systematic sample design for both active and negative samples because of its relative ease to administer, its validity, and because it yields a sample proportional to variations in the caseload over the course of the annual review period. (To obtain a systematic sample, a State agency would select every *k*th case after a random

start between 1 and *k*. The value of *k* is dependent upon the estimated size of the universe and the sample size.) A State agency may, however, develop an alternative sampling design better suited for its particular situation. Whatever the design, it must conform to commonly acceptable statistical theory and application (see paragraph (b)(4) of this section).

(4) *FNS review and approval.* The State agency shall submit its sampling plan to FNS for approval as a part of its State Plan of Operation in accordance with § 272.2(e)(4). In addition, all sampling procedures used by the State agency, including frame composition, construction, and content shall be fully documented and available for review by FNS.

(b) *Sample size.* There are two samples for the food stamp quality control review process, an active case sample and a negative case sample. The size of both these samples is based on the State agency's average monthly caseload during the annual review period. Costs associated with a State agency's sample sizes are reimbursable as specified in § 277.4.

(1) *Active cases.* (i) All active cases shall be selected in accordance with standard procedures, and the review findings shall be included in the calculation of the State agency's payment error and underissuance error rates.

(ii) Unless a State agency chooses to select and review a number of active cases determined by the formulas provided in paragraph (b)(1)(iii) of this section and has included in its sampling plan the reliability certification required by paragraph (a)(2)(iii) of this section, the minimum number of active cases to be selected and reviewed by a State agency during each annual review period shall be determined as follows:

Average monthly reviewable caseload (N)	Minimum annual sample size (n)
60,000 and over .....	n=2400
10,000 to 59,999 .....	n=300+[0.042(N - 10,000)]
Under 10,000 .....	n=300

(iii) A State agency which includes in its sampling plan the statement required by paragraph (a)(2)(iii) of this section may determine the minimum number of active cases to be selected

and reviewed during each annual review period as follows:

Average monthly reviewable caseload (N)	Minimum annual sample size (n)
60,000 and over .....	n=1020
12,942 to 59,999 .....	n=300+[0.0153(N – 12,941)]
Under 12,942 .....	n=300

(iv) In the formulas in paragraphs (b)(1)(ii) and (iii) of this section n is the required active case sample size. This is the minimum number of active cases subject to review which must be selected each review period. Also in the formulas, N is the average monthly participating caseload subject to quality control review (i.e., households which are included in the active universe defined in paragraph (e)(1) of this section) during the annual review period.

(2) *Negative cases.*

(i) Unless a State agency chooses to select and review a number of negative cases determined by the formulas provided in paragraph (b)(2)(ii) of this section and has included in its sampling plan the reliability certification required by paragraph (a)(2)(iv) of this section, the minimum number of negative cases to be selected and reviewed by a State agency during each annual review period shall be determined as follows:

Average monthly reviewable negative caseload (N)	Minimum annual sample size (n)
5,000 and over .....	n=800
500 to 4,999 .....	n=150+[0.144(N – 500)]
Under 500 .....	n=150

(ii) A State agency which includes in its sampling plan the statement required by paragraph (a)(2)(iv) of this section may determine the minimum number of negative cases to be selected and reviewed during each annual review period as follows:

Average monthly reviewable negative caseload (N)	Minimum annual sample size (n)
5,000 and over .....	n=680
684 to 4,999 .....	n=150+[0.1224(N – 683)]
Under 684 .....	n=150

(iii) In the formulas in this paragraph (b)(2), n is the required negative sample size. This is the minimum number of negative cases subject to review which must be selected each review period.

(iv) In the formulas in this paragraph (b)(2), N is the average monthly number of negative cases which are subject to quality control review (i.e., households which are part of the negative universe defined in paragraph (e)(2) of this section) during the annual review period.

(3) *Unanticipated changes.* Since the average monthly caseloads (both active and negative) must be estimated at the beginning of each annual review period, unanticipated changes can result in the need for adjustments to the sample size. FNS shall not penalize a State agency that does not adjust its sample size if the actual caseload during a review period is less than 20 percent larger than the estimated caseload initially used to determine sample size. If the actual caseload is more than 20 percent larger than the estimated caseload, the larger sample size appropriate for the actual caseload will be used in computing the sample completion rate.

(4) *Alternative designs.* The active and negative sample size determinations assume that State agencies will use a systematic or simple random sample design. State agencies able to obtain results of equivalent reliability with smaller samples and appropriate design may use an alternative design with FNS approval. To receive FNS approval, proposals for any type of alternative design must:

(i) Demonstrate that the alternative design provides payment error rate estimates with equal-or-better predicted precision than would be obtained had the State agency reviewed simple random samples of the sizes specified in paragraphs (b)(1) and (b)(2) of this section.

(ii) Describe all weighting, and estimation procedures if the sample design is non-self-weighted, or uses a sampling technique other than systematic sampling.

(iii) Demonstrate that self-weighting is actually achieved in sample designs claimed to be self-weighting.

(c) *Sample selection.* The selection of cases for quality control review shall be made separately for active and negative cases each month during the annual review period. Each month each State agency shall select for review approximately one-twelfth of its required

## Food and Nutrition Service, USDA

## § 275.11

sample, unless FNS has approved other numbers of cases specified in the sampling plan.

(1) *Substitutions.* Once a household has been identified for inclusion in the sample by a predesigned sampling procedure, substitutions are not acceptable. An active case must be reviewed each time it is selected for the sample. If a household is selected more than once for the negative sample as the result of separate and distinct instances of denial, suspension or termination, it shall be reviewed each time.

(2) *Corrections.* Excessive undersampling must be corrected during the annual review period. Excessive oversampling may be corrected at the State agency's option. Cases which are dropped to compensate for oversampling shall be reported as not subject to review. Because corrections must not bias the sample results, cases which are dropped to compensate for oversampling must comprise a random subsample of all cases selected (including those completed, not completed, and not subject to review). Cases which are added to the sample to compensate for undersampling must be randomly selected from the entire frame in accordance with the procedures specified in paragraphs (b), (c)(1), and (e) of this section. All sample adjustments must be fully documented and available for review by FNS.

(d) *Required sample size.* A State agency's required sample size is the larger of either the number of cases selected which are subject to review or the number of cases chosen for selection and review according to paragraph (b) of this section.

(e) *Sample frame.* The State agency shall select cases for quality control review from a sample frame. The choice of a sampling frame shall depend upon the criteria of timeliness, completeness, accuracy, and administrative burden. Complete coverage of the sample universes, as defined in paragraph (f) of this section, must be assured so that every household subject to quality control review has an equal or known chance of being selected in the sample. Since the food stamp quality control review process requires an active and negative sample,

two corresponding sample frames are also required.

(1) *Active cases.* The frame for active cases shall list all households which were: (i) Certified prior to, or during, the sample month; and (ii) issued benefits for the sample month, except for those households excluded from the universe in paragraph (f)(1) of this section. State agencies may elect to use either a list of certified eligible households or a list of households issued an allotment. If the State agency uses a list of certified eligible households, those households which are issued benefits for the sample month after the frame has been compiled shall be included in a supplemental list. If the State agency uses an issuance list, the State agency shall ensure that the list includes those households which do not actually receive an allotment because the entire amount is recovered for repayment of an overissuance in accordance with the allotment reduction procedures in § 273.18.

(2) *Negative cases.* The frame for negative cases shall list:

(i) All households whose applications for food stamp benefits were denied by an action in the sample month or effective for the sample month except those excluded from the universe in paragraph (f)(2) of this section. If a household is subject to more than one denial action in a single sample month, each action shall be listed separately in the sample frame; and

(ii) All households whose food stamp benefits were suspended or terminated by an action in the sample month or effective for the sample month except those excluded from the universe in paragraph (f)(2) of this section.

(3) *Unwanted cases.* A frame may include cases for which information is not desired (e.g., households which have been certified but did not actually participate during the sample month). When such cases cannot be eliminated from the frame beforehand and are selected for the sample, they must be accounted for and reported as being not subject to review in accordance with the provisions in §§ 275.12(g) and 275.13(e).

(f) *Sample universe.* The State agency shall ensure that its active and negative case frames accurately reflect

their sample universes. There are two sample universes for the food stamp quality control review process, an active case universe and a negative case universe. The exceptions noted below for both universes are households not usually amenable to quality control review.

(1) *Active cases.* The universe for active cases shall include all households certified prior to, or during, the sample month and receiving food stamps for the sample month, except for the following:

- (i) A household in which all the members had died or had moved out of the State before the review could be undertaken or completed;
- (ii) A household receiving food stamps under a disaster certification authorized by FNS;
- (iii) A household which is under investigation for intentional Program violation, including a household with a pending administrative disqualification hearing;
- (iv) A household appealing an adverse action when the review date falls within the time period covered by continued participation pending the hearing; or
- (v) A household receiving restored benefits in accordance with § 273.17 but not participating based upon an approved application. Other households excluded from the active case universe during the review process are identified in § 275.12(g).

(2) *Negative cases.* The universe for negative cases shall include all households whose applications for food stamps were denied or whose food stamp benefits were suspended or terminated by an action in the sample month except the following:

- (i) A household which had its case closed due to expiration of the certification period;
- (ii) A household denied food stamps under a disaster certification authorized by FNS;
- (iii) A household which withdrew an application prior to the agency's determination;
- (iv) A household which is under active investigation for Intentional Program Violation;
- (v) A household which was denied, but subsequently certified within the

normal 30 day processing standard, using the same application form;

(vi) A household which was suspended or terminated but the suspension or termination did not result in a break in participation that is the result of deliberate State agency action. There would be no break in participation if the household is authorized to receive its full allotment in the month for which the suspension or termination was effective other than continuation of benefits pending a fair hearing. Pro rated benefits are not considered to be a full allotment;

(vii) A household which has been sent a notice of pending status but which was not actually denied participation;

(viii) A household which was terminated for failure to file a complete monthly report by the extended filing date, but reinstated when it subsequently filed the complete report before the end of the issuance month;

(ix) Other households excluded from the negative case universe during the review process as identified in § 275.13(e).

(g) *Demonstration projects/SSA processing.* Households correctly classified for participation under the rules of an FNS-authorized demonstration project which FNS determines to significantly modify the rules for determining households' eligibility or allotment level, and households participating based upon an application processed by Social Security Administration personnel shall be included in the selection and review process. They shall be included in the universe for calculating sample sizes and included in the sample frames for sample selection as specified in paragraphs (b) through (e) of this section. In addition, they shall be included in the quality control review reports as specified in § 275.21(e) and included in the calculation of a State agency's completion rate as specified in § 275.25(e)(8). However, all results of reviews of active and negative demonstration project/SSA processed cases shall be excluded from the determination of State agencies' active and negative case error rates, payment error rates, and underissuance error rates as described in § 275.23(c). The review of

## Food and Nutrition Service, USDA

## § 275.12

these cases shall be conducted in accordance with the provisions specified in §§ 275.12(h) and 275.13(f).

[Amdt. 260, 49 FR 6304, Feb. 17, 1984; 49 FR 14495, Apr. 12, 1984, as amended by Amdt. 262, 49 FR 50598, Dec. 31, 1984; Amdt. 266, 52 FR 3409, Feb. 4, 1987; Amdt. 328, 56 FR 60051, Nov. 27, 1991; Amdt. 366, 62 FR 29658, June 2, 1997; Amdt. 373, 64 FR 38295, July 16, 1999]

### § 275.12 Review of active cases.

(a) *General.* A sample of households which were certified prior to, or during, the sample month and issued food stamp benefits for the sample month shall be selected for quality control review. These active cases shall be reviewed to determine if the household is eligible and, if eligible, whether the household is receiving the correct allotment. The determination of a household's eligibility shall be based on an examination and verification of all elements of eligibility (i.e., basic program requirements, resources, income, and deductions). The elements of eligibility are specified in §§ 273.1 and 273.3 through 273.9. The verified circumstances and the resulting benefit level determined by the quality control review shall be compared to the benefits authorized by the State agency as of the review date. When changes in household circumstances occur, the reviewer shall determine whether the changes were reported by the participant and handled by the agency in accordance with the rules set forth in §§ 273.12, 273.13 and 273.21, as appropriate. For active cases, the review date shall always fall within the sample month, either the first day of a calendar or fiscal month or the day of certification, whichever is later. The review of active cases shall include: a household case record review; a field investigation, except as provided in paragraph (b) of this section; the identification of any variances; an error analysis; and the reporting of review findings.

(b) *Household case record review.* The reviewer shall examine the household case record to identify the specific facts relating to the household's eligibility and basis of issuance. If the reviewer is unable to locate the household case record, the reviewer shall identify as many of the pertinent facts

as possible from the household issuance record. The case record review shall include all information applicable to the case as of the review month, including the application and worksheet in effect as of the review date. Documentation contained in the case record can be used as verification if it is not subject to change and applies to the sample month. If during the case record review the reviewer can determine and verify the household's ineligibility the review can be terminated at that point, provided that if the determination is based on information not obtained from the household then the correctness of that information must be confirmed as provided in paragraph (c)(2) of this section. The reviewer shall utilize information obtained through the case record review to complete column (2) of the Integrated Worksheet, Form FNS-380, and to tentatively plan the content of the field investigation.

(c) *Field investigation.* A full field investigation shall be conducted for all active cases selected in the sample month except as provided in paragraph (b) of this section. A full field investigation shall include a review of any information pertinent to a particular case which is available through the State Income and Eligibility Verification System (IEVS) as specified in § 272.8. If during the field investigation the reviewer determines and verifies the household's ineligibility, the review can be terminated at that point, provided that if the determination is based on information not obtained from the household then the correctness of that information must be confirmed as provided in paragraph (c)(2) of this section. In Alaska an exception to this requirement can be made in those isolated areas not reachable by regularly scheduled commercial air service, automobile, or other public transportation provided one fully documented attempt to contact the household has been made. Such cases may be completed through casefile review and collateral contact. The field investigation will include interviews with the head of household, spouse, or authorized representative; contact with collateral sources of information; and any other materials and activity pertinent to the review of the
